

LANDA[®]
PARTS WASHERS

Since 1969

North America's **LARGEST** Manufacturer of
Industrial **PRESSURE WASHERS** and **PARTS WASHERS**

SJ-5

Top-Load Automatic Small Parts Washer

- Flow Rate of 27 GPM
- 1-Year Warranty
- Handles Loads of Up to 500 lbs.
- 45 Gal. Tank Capacity

■ Heavy-duty, welded, stationary spray bars feature 16 brass precision **Spray Nozzles** designed to flush parts from all angles for optimum cleaning effectiveness.

■ High-efficiency calrod **Heating Element** is protected in an incoloy sheath for long life; **Adjustable Thermostat**, 50-175°F.

■ Removable parts basket is tapered producing **Focused Cleaning** by keeping the parts in the center for more uniform and effective washing.

■ Steel **Chip Tray**, located directly below the basket, retains heat in the cleaning solution and prevents stray parts and large metal shavings from falling into the tank. Without the tray, wash water would have to be drained to retrieve stray parts.

■ **Modular Design** offers flexibility for adding many options, including flow-through **Hand Brush** with pump, **Caster Wheels**, 7-day programmable **Heater Timer**, **Automatic Water Fill** for replenishing the tank and **Extra Heating** capability.

■ 45-Gallon **Wash Tank** is extra large for keeping the water hotter and extending the life of the cleaning solution.

■ **Low-Water Shutoff Valve** uses a reliable proximity sensor to shut down the unit if the tank level drops too low thus protecting both the heating element and pump from damage.

■ Cabinet is made of a durable **14-Gauge Steel** covered by a two-step liquid polyurethane paint similar to that used in the automotive industry.

■ Side-mounted **Gas Strut** makes it easy to lift open the lid—and keep it open—with one hand, as well as close it.

■ **Tri-Lingual Operating Instructions and Warning Labels** provide owner liability protection.

■ **Momentary Safety Switch** automatically turns off pump when lid is opened to protect operator from hot-water spray.

■ Rugged 1/2 HP **Centrifugal Pump** delivers up to 27 GPM and continually flushes seals for longer life.

■ Large 1½" **Drain Port** allows for quick removal of wastewater from tank.

■ Conveniently located water-resistant **Control Panel** has on-off **Switches**, **Monitoring Lights** and one-hour **Wash Timer**, which allows the operator to set wash cycles for work time efficiency and energy savings.

■ Easy-to-access **Drain Valve** allows for convenient skimming of oil from wash water.

■ All key **Plumbing and Motorized Components** are ideally positioned on the side and back for convenience in servicing and maintenance.

WHY CHOOSE LANDA'S SJ-5

The SJ-5 is another example of how Landa has improved on conventional designs for parts washers with fixed spray arms. The SJ-5 is well known for these innovations and improvements:

■ **SURROUND CLEANING:** Heavy-duty spray arms encircle the inside of the cabinet and feature 16 precision spray nozzles, which flush parts from all angles at a rate of up to 27 GPM.

■ **QUALITY BUILT:** The rugged cabinet is made of 14-gauge steel and is further protected by a two-step liquid polyurethane paint, similar to that used in the automotive industry for all-weather protection. The 45-gallon tank is made of 14-gauge steel.

■ **AUTOMATED:** A one-hour timer allows workers to leave the cleaning and return to their work. Plus, an optional seven-day heater timer ensures the water is hot when it's needed and saves energy when not in use. The adjustable thermostat automatically maintains the water temperature to your preference.

■ **DESIGNED FOR SAFETY:** The SJ-5 is loaded with safety features, including a safety switch that immediately shuts down the pump when the lid is lifted as well as low-water shutoff valve that turns off the unit should the wash water drop too low. As with all Landa equipment, operating instructions and warning labels are in English, Spanish and French for owner and operator protection.
