TASKFORCE® EXTERNAL FILTER WET/DRY VACUUM

EXTERNAL FILTER VAC

TASKFORCE® EXTERNAL FILTER WET/DRY VACUUM

Simultaneous wet and dry recovery, with a rugged design that withstands demanding applications

It's simple physics. Recovering heavier debris efficiently requires increased airflow when using a vacuum. The Taskforce® External Filter Wet/Dry Vacuum creates powerful air flow beyond that found in traditional wet/dry vacuums. As a result, the unit is perfect for maintenance departments and industrial applications where the recovery of heavier debris is an everyday part of the job. Dry wall dust, sawdust, cement dust, water, and powder are no match for its recovery power. This electric unit can be easily moved from the tool shop to the factory floor or building site or other places where rapid pick-up of heavy debris is a must.

Better still, the Taskforce® can recover wet and dry material without the need to stop and change or clean an internal filter. That means added efficiency, reduced work stoppage, and no more guesswork when it comes to choosing the right filter for debris recovery. A 2.25 HP powerhead with 184 CFM of airflow is fitted on a 16-gallon T-Lite thermoplastic tank. The tank is crack and corrosion resistant and sits on a convenient tip-and-pour carrier with four wheels for easy transport. An external filter comes standard with the unit. A true 2" intake can be fitted with 1.5" and 2" hoses and attachments. A wide selection of optional tools and attachments (see back page) are available for a variety of applications.

Mobile

Front swivel castors and large rear wheels permit easy transport, stability and control regardless of how full the tank is.

CFM vs. Waterlift

Many competitor's vacuum systems use waterlift as the primary measure of a unit's effectiveness and power. It should be noted, however, that in a heavy industrial application the average competitor's wet/dry vacuum produces an insufficient amount of airflow (cubic feet per minute, or CFM) to meet the recovery requirements of the application.

A unit's CFM is necessary to tell the true story of its capability in an industrial environment. This is where a Tornado 98995 is the ideal solution. With high-levels of airflow (up to 184 CFM) these units have what it takes for rapid and efficient debris recovery.

Operator-friendly

The tip-and-pour tank and carrier makes transport and disposal of a full tank easy and hassle-free. A tool caddy is mounted on the back for optional tools and attachments, spray bottles, and other cleaning supplies.

Simple and effective

The unit can be broken down easily. Shown here: The 16-gallon T-Lite thermoplastic tank and the detachable 2.25 HP powerhead. The powerhead can be removed from the cover and used separately with an optional blowing nozzle for air blowing/sweeping. A large poly external filter comes standard with the unit as well.

Powerful

A 2.25 HP powerhead provides the needed power to tackle many aggressive industrial vacuuming applications. The powerhead is fitted on the tank cover with a locking collar. It can easily be removed for service, transport, or blowing applications.
